## Theories of Development

June 26 – 27, 2014  
Uni Mail – Geneva

**Thursday afternoon, June 26, 2014**

13h30

**Robert Siegler**, Carnegie Mellon University  
*An Integrative Theory of Numerical Development*

**Abstract:**

The modern field of numerical development examines knowledge of whole numbers and fractions among non-human animals, infants, children, and adults using cross-sectional, longitudinal, microgenetic, and intervention designs and behavioral and neuroscience methods. This talk presents a theory of numerical development intended to integrate this sprawling area within a single framework.
